Why Helix

- ✓ Coordinated with your fire strategy and building use
- ✓ Designed and installed to relevant British Standards
- ✓ Responsive maintenance for total system reliability
- ✓ Documented testing and certification for compliance

How We Work

1. Survey

We assess your environment and system requirements.

2. Design

We design coordinated systems to meet standards and building needs.

3. Installation

Professional installation by qualified engineers with minimal disruption.

4. Testing

Functional testing and commissioning to confirm system performance.

5. Certification

Full certification and documentation for your records and assurance.

Integrated Safety Solutions

All systems work together to support safe evacuation and communication.

Minimise Risk

Regular testing and maintenance reduce risk and downtime.

Compliance Confidence

Up-to-date records and certification keep you inspection ready.
